

The easy way to connect your desktop or notebook to a wireless network

Connect your USB-equipped desktop or notebook computer to a wireless network with the Linksys Wireless-B USB Network Adapter, without the trouble of opening up the case of your desktop computer.

To install, simply plug the Adapter into any available USB port. It gets its power through the USB connection, so no power cord is necessary. The included Setup Wizard walks you through configuring the Adapter to your wireless network settings, step by step. And your wireless communications can be protected by 128-bit encryption, so your data stays secure.

The Wireless-B USB Network Adapter's high-gain antenna lets you put your computer almost anywhere in the building, without the cost and hassle of running cables. Now you don't have to drill holes in your walls and climb through the attic or cellar to get connected to the network. Once you're connected, you can keep in touch with your e-mail, access the Internet, use instant messaging to chat with friends, and share files and other resources such as printers and hard disk storage space with other computers on the network.

So don't hassle with running cables through your house -- get connected the easy way with the Wireless-B USB Network Adapter.
