

QUICK INSTALLATION GUIDE

Powerline 4-Port Network Adapter

Model: PLTS200

Package Contents

- Powerline 4-Port Network Adapter
- Powerline Utility and User Guide on CD-ROM
- Ethernet Network Cable
- Power Cord
- Quick Installation Guide
- Stand

Overview

Before you begin, you should have a powerline network already set up, with your router connected to a Powerline Adapter. The following instructions describe how to connect the Powerline 4-Port Network Adapter (model number: PLTS200) to additional computers or other network devices.

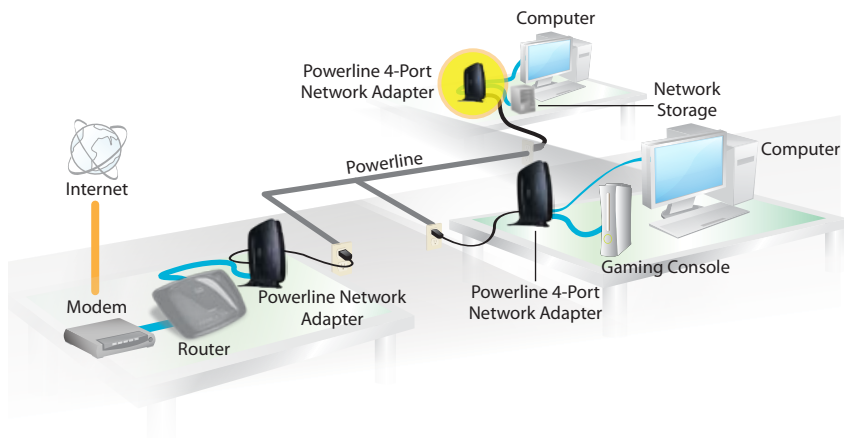

Diagram of a Typical Powerline Network

Installation

- A. Connect one end of an Ethernet network cable to the Ethernet port of the Adapter.

Connect Ethernet Network Cable

- B.** Connect the other end to the Ethernet port of your computer or other network device.

Connect Other End of Network Cable

NOTE: You can connect additional computers or other network devices to the remaining Ethernet ports of the Adapter.

- C.** Connect the power cord to the Power port.

Connect Power Cord

- D.** Plug the other end into an electrical outlet.

Plug Power into Outlet

NOTE: Because the Adapter sends data over the power lines of your home, Linksys recommends that you plug the Adapter directly into an electrical outlet. The Adapter has its own power filter to help protect against surges.

- E. The Power, Ethernet, and Powerline LEDs light up. (The number of lit Ethernet LEDs depends on how many devices are connected.)

NOTE: The Powerline LED  indicates that the connection between the Adapter and your powerline network has been established.

Power, Ethernet, and Powerline LEDs Light Up

Hardware installation is complete.

NOTE: If you want to configure advanced security for your powerline network, install the Powerline Utility from the included CD-ROM. For more information, refer to the User Guide on the CD-ROM.

For additional information or troubleshooting help, refer to the User Guide on the CD-ROM. Additional support is also available by phone or online.
